

First step we need to run the AEM

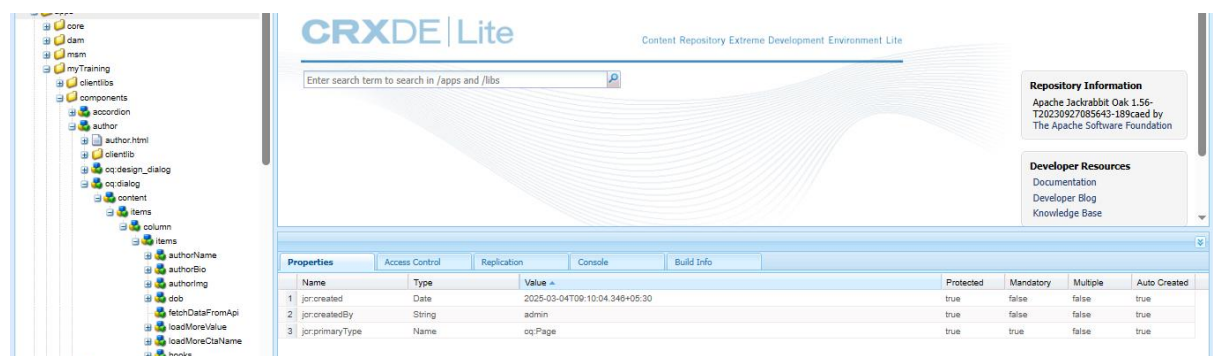

```
C:\Windows\System32\cmd.exe - java -jar aem-author-p4502.jar
Microsoft Windows [Version 10.0.19045.5487]
(c) Microsoft Corporation. All rights reserved.

E:\Author>java -jar aem-author-p4502.jar
Loading quickstart properties: default
Loading quickstart properties: instance
Low-memory action set to fork
Using 64bit VM settings, min.heap=1024MB, min permgen=256MB, default fork arguments=[-Xmx1024m, -XX:MaxPermSize=256m]
The JVM reports a heap size of 4050 MB, meets our expectation of 1024 MB +/- 20
Setting properties from filename 'E:\Author\author-p4502.jar'
Option '-quickstart.server.port' set to '4502' from filename aem-author-p4502.jar
Verbose option not active, closing stdin and redirecting stdout and stderr
Redirecting stdout to E:\Author\crx-quickstart\logs\stdout.log
Redirecting stderr to E:\Author\crx-quickstart\logs\stderr.log
Press CTRL-C to shutdown the Quickstart server...
WARNING: An illegal reflective access operation has occurred
WARNING: Illegal reflective access by org.apache.sling.commons.threads.impl.ThreadLocalCleaner (launchpad:resources/inst
all/15/org.apache.sling.commons.threads-3.2.22.jar) to field java.lang.Thread.threadLocals

WARNING: All illegal access operations will be denied in a future release
```

Then we need to open the CRXDE using the link <http://localhost:4502/crx/de/index.jsp#>

We need to create properties in this hierarchy

Create a author.html and put this html code in it

### author.html

```
<sly data-sly-use.clientlib="core/wcm/components/commons/v1/templates/clientlib.html">
    <sly data-sly-call="{clientlib.all @ categories='myTraining.authorcomponent', async=true}"/>
</sly>

<div class="author-component" data-sly-
use.authorModel="com.myTraining.core.models.AuthorModel">

    <div>

    </div>

    <div class="apii">${authorModel.fetchApi}</div>

    <h2>Author Name: ${authorModel.authorName}</h2>

    <p>Author BIO: ${authorModel.authorBio}</p>

    <p><strong>Author Date of Birth:</strong> ${'dd MMMM, YYYY' @
format=authorModel.dob,type='datetime'}

    <div data-sly-list.item="{authorModel.books}">

        <h2> Books By Author</h2>

        <p>${item}</p>

        <div class="{properties.fetchDataFromApi}">

            </div>

            <div class="author-container">

                </div>

                <button id="load-more" data-cards-to-
show="{authorModel.loadMoreValue}">${authorModel.loadMoreCtaName}</button>

            </div>

        </div>
</div>
```

In order to fetch data from the root path we need to create a site.js javascript file in this hierarchy and enter the javascript code which will fetch the data from the dummy api we are using this api <https://dummyjson.com/c/f478-069d-495b-af00> which is a dummy api

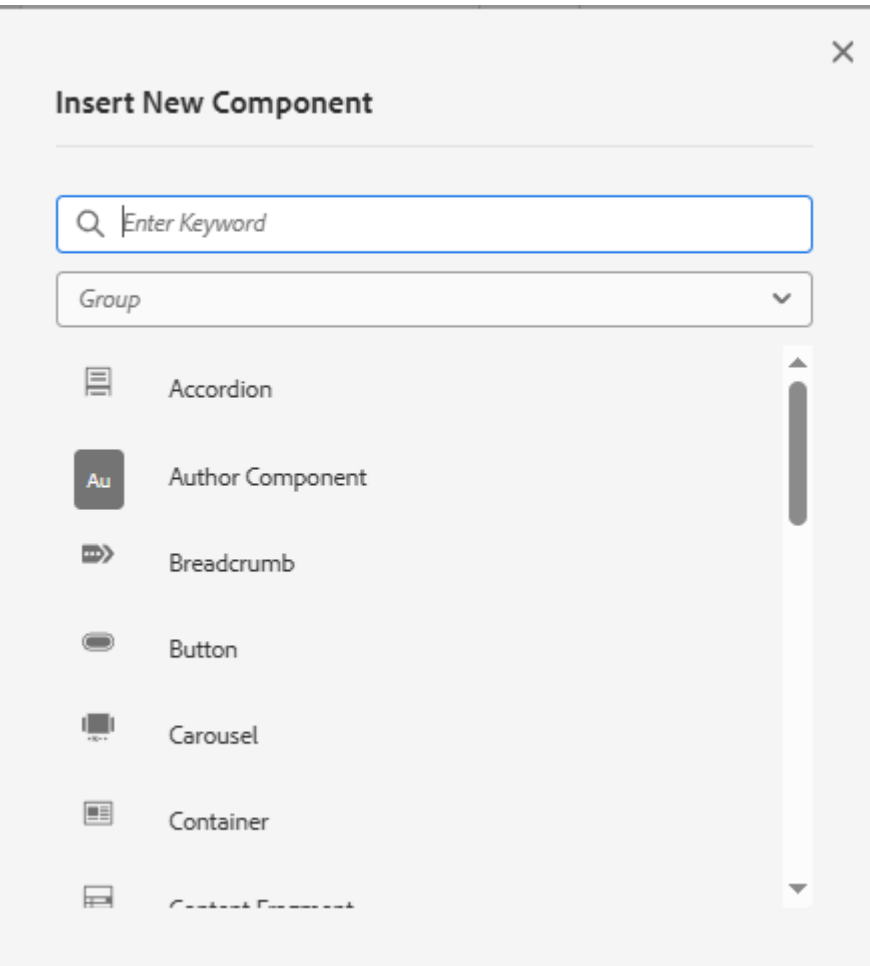

Then we need to create a site for inserting the component here I am creating a page and named it as page

Inside the web page we need to add the author component

Search of Author component and add it to the web page

In the left hand side there's the author component and modify it

You see a dialog box with author details

The screenshot shows a dialog box titled "Author Details" with a question mark icon and a close button in the top right corner. The dialog contains four input fields, each with an information icon to its right: "Author Name" (a single-line text field), "Author Bio" (a multi-line text area), "Author Image" (a single-line text field), and "Date of Birth" (a date picker). At the bottom of the dialog are two buttons: "Cancel" and "Done".

Enter the author's details in the dialog box

The screenshot shows the same "Author Details" dialog box, but now it is populated with information for Leonardo da Vinci. The "Author Name" field contains "Leonardo Da Vinci". The "Author Bio" field contains a paragraph: "Leonardo da Vinci (1452–1519) was an Italian polymath of the Renaissance, excelling as a painter, scientist, inventor, and engineer. Known for his iconic works such as the Mona Lisa and The Last Supper, he contributed significantly to art, anatomy, engineering, and architecture. His notebooks contain numerous sketches and ideas for flying machines, war devices, and". The "Author Image" field contains a URL: "https://hips.hearstapps.com/hmg-prod/images/portrait-of-leonardo-da-vinci-1...". The "Date of Birth" field shows "15 April 1452". The "Cancel" and "Done" buttons remain at the bottom.

Enable the checker box to fetch the data from the API and enter the Load More Card Value as you want it will load the cards each time you click Load more button

☒ Fetch data from Api? if yes please check the box below ⓘ

Load More Card Value ⓘ

Load More Cta Name ⓘ

Author's Books
